

Computers need routine service to protect your privacy and perform at their peak

By: John Brady - Fox River Networks

Computers are like cars, the more they are used, the slower they begin to perform.

Effective security and efficient performance are only maintained through routine service procedures.

The Internet is both the greatest and most destructive thing to happen to our computers since we began to connect them together.

The vast amounts of information, and the wealth of resources available on the Internet are too valuable to abandon, but in order to access them we often have to wander through a mine field of spyware, viruses and annoying pop-up windows.

Protecting your computer can not be considered an option, it is a requirement. We store documents and personal information on our computers that needs to be kept safe and secure.

The 3 necessary components to computer security:

- Firewall – Designed to protect your computer from inbound threats and attacks.
- Anti-Virus Software - Attempts to identify and eliminate programs written to compromise your computer system or destroy your data.
- Anti-Spyware Software - Attempts to identify and remove software that is installed surreptitiously on a personal computer to intercept or take partial control over the user's interaction with the computer, without the user's informed consent.

The more common Internet Security Suites now contain all of the basic elements to provide you with general protection.

The greatest challenge to securing your computer, is that computer security is a constantly moving target.

It is critical to have the most recent updates to spyware and virus protection programs, and to run them regularly. Also it is important to understand that most computer infection is self inflicted. Recently I have noticed many more attempts by virus and spyware programs to disguise themselves as warnings that users feel compelled to click on. Once that first click is made it is sometimes overwhelming

to stop the flow of pop-ups that occur.

What do you do when things start going wrong?

If insuring that your protection is up-to-date, and performing routine scans has not been enough to keep your computer free from infection, or your system seems to be running much slower lately, you should seek professional help.

We provide computer support through the Internet to save you time and money.

Our PC Tune Up, was designed to “Get you back up to Speed” by addressing your computer performance and security issues. Feel free to call with questions or concerns you may have and remember that the holidays are approaching and we have Gift Certificates available to make your shopping easier.

Call Today (800) 676-5870

Fox River Networks is the help desk for business and personal computer users. We fix your computer through the Internet while you watch from your desk. No Risk Guarantee – It's fixed or It's free.

Is your computer running slower than when you purchased it?
